

Glass Q&A: Can we use Laminated Glass for Shower Doors?

By Peter Lin

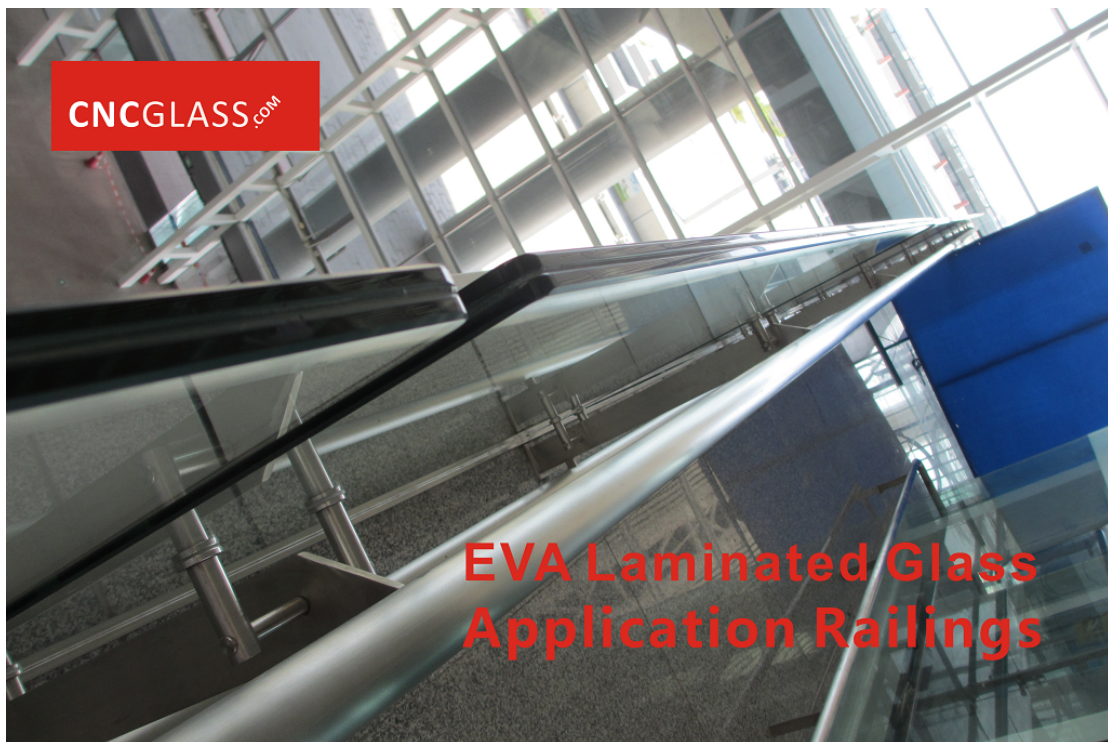

Glass Questions

There is a glass question asked in YAHOO ANSWERS:

Can we use Laminated Glass for Shower Doors?

We are setting up a small hotel where we have decided to use glass shower doors for its bathrooms. Initially we were set to use tempered glass for the doors, but found that tempered glass is not available locally and has to be shipped from West Malaysia, making it very expensive. We have been asked to use laminated glass instead, which is widely available here in East Malaysia. But is laminated glass strength appropriate for bathroom use?

Thanks, comments are most appreciated. :)

Glass Answers

Here is my comments:

Yes, you can use the laminated glass in shower door. Actually many people have done this. And there are two types of laminated glass, PVB laminated glass and EVA laminated glass. I suggest you use the EVA laminated glass, because EVA laminated glass is better at moisture resistance.

And We have the special type of CNCGLASS EVA film for laminated glass that is good at alkalinity environment resistance, and our JADE WHITE CNC GLASS film is translucent, light can pass through, but people can not see through (privacy protected), very good at shower door implication.

If you have any glass questions, please feel free to talk with us.
